EDUCATION

University of Central Florida

Bachelor of Science, Computer Science

Aug 2023 - Aug 2027

Orlando, FL

EXPERIENCE

University of Central Florida, College of Sciences

Undergraduate Learning Assistant

Aug 2024 - Present

Orlando, FL

- Facilitated student comprehension in Calculus I at the Mathematics Assistance and Learning Lab (MALL), demonstrating a passion for learning and problem-solving.
- Collaborated with peers to adapt instructional techniques, reflecting an eagerness to learn and a commitment to innovative, digital solutions in educational settings.

Brown & Brown, Inc.

Technology Solutions Intern

May 2026 – August 2026

Daytona Beach, FL

- Built an AI-powered VS Code extension in JavaScript that automates pull request reviews using security, performance, and maintainability agents, reducing estimated review time by up to 80%.
- Developed a Python CI/CD pipeline that replaced manual page-by-page publishing by converting Markdown documentation to XWiki (a documentation platform), preserving formatting, publishing only changed pages, and simplifying technical content for non-developers.
- Integrated Azure DevOps, Git worktrees, REST APIs, Entra ID authentication, and AI-based documentation rewriting.

University of Central Florida, College of Engineering and Computer Science

Undergraduate Research Assistant

Jan 2025 – May 2025

Orlando, FL

- Conducted research on continuous Linux kernel fuzzing, optimizing configurations to maximize patch coverage and minimize downtime.
- Leveraged hands-on technical expertise and analytical skills to resolve complex system challenges in a collaborative development environment.

PROJECTS

Roommate mobile application (<https://github.com/nurlanmnn/roomate>)

Personal Project (December 2025–Present)

- A roommate coordination app to help you and your roommates manage shared living expenses, shopping lists, calendar events, and household goals.
- The app is a full-stack TypeScript application built with React Native (Expo) and Node.js, utilizing Express and MongoDB to manage shared expenses, shopping lists, and household goals with JWT-based authentication.

PickUp UCF mobile application (<https://github.com/nurlanmnn/pickup-ucf>)

Knight Hacks VIII Hackathon (Oct 24–26, 2025)

- A mobile app for UCF students to find, create, and join pickup sports sessions.
- Built with React Native (Expo), TypeScript, and Supabase backend.
- Enabled UCF email verification, full CRUD (create, read, update, delete) for sports sessions with filtering, search, capacity management, skill levels, real-time chat for session participants.

SkillMatch AI Web Application (<https://github.com/EthanDelCampo/SkillMatchAI>)

Knight Hacks Project Launch (Spring 2025)

- Developed the backend of an AI-powered career recommendation system using Node.js, Express, and Gemini API.
- Created RESTful API endpoints to process survey data and return personalized career suggestions.
- Ensured efficient data handling, validation, and seamless integration with the frontend.

TECHNICAL SKILLS

- **Languages:** Python, TypeScript, JavaScript, Java, C, SQL, HTML, CSS, Swift
- **Frameworks & Libraries:** React Native, Expo, Node.js, Express.js, Django, Django REST Framework, PyTorch, TensorFlow, Scikit-learn, NumPy

- **Databases:** PostgreSQL, MongoDB, Supabase
- **Cloud & DevOps:** Azure, Azure DevOps, GitHub Actions, Docker, Kubernetes, CI/CD, Entra ID
- **Developer Tools:** Git, Git worktrees, VS Code Extension API, REST APIs, Pandoc, XWiki, Selenium, Beautiful Soup
- **Areas:** Software Engineering, Full-Stack Development, Mobile Development, AI/ML, Developer Tooling, Automation
